# Radmir Islamov

Software engineering · SRE · ML Systems

raraislamov@gmail.com · Telegram · GitHub · Website

Java and Python development, infrastructure and observability. Experience at VK and T-Bank. Moving towards ML engineering, with research interests in evaluating recognition of historical texts.

## Experience

### T-Bank / 2025-2026

SRE / Observability Engineer

- Evaluated Elasticsearch log-storage optimisations on a pre-production testbed: compared force merging, removal of copy_to and index sorting, and prepared recommendations accounting for query latency and operational risks.
- Developed a reproducible methodology for infrastructure experiments: recorded baseline measurements, configurations and comparison criteria, and resolved testbed deployment and configuration issues.
- Extended an internal C#/.NET diagnostic panel with incident-investigation workflows, direct Kibana links and runbook recovery steps for on-call engineers.
- Improved change control for critical configurations: separated automated and manual operations, incorporated SRE review and documented safe change procedures.

### VK / 2024-2025

IT Support Engineer (L3)

- Automated diagnostic data collection and preparation with Bash and jq, combining logs and check results into evidence for troubleshooting and escalation.
- Isolated workstation and internal-service access issues through system logs, OS configuration and network checks, including HTTP and TCP availability tests.
- Provisioned and configured macOS workstations, supported meeting-room equipment and Zoom Rooms, and resolved employee requests according to priority and SLA.

## Education

MIPT · Started in 2026
Master's programme · Machine Intelligence in Finance. In progress; degree not yet awarded.

HSE University · Started in 2025
Master's programme · AI Research and Entrepreneurship. Programme not completed; degree not yet awarded.

MIET · 2021-2025
Bachelor's degree · Software Engineering. Degree awarded. Thesis: an Nginx log analysis module.

## Selected projects

Nginx Log Analyzer - Java / Spring Boot. Log parsing, statistical analysis and reports. Connected to my MIET thesis and papers on log analysis.

SRE Observability Platform - Python, Prometheus, Docker, Kubernetes. An educational testbed for HTTP probes and availability monitoring; open code and configuration.

n-step Soft Actor-Critic - PyTorch. A course comparison of three return horizons. Results are available; one seed per configuration limits the conclusions.

## Skills

Development: Java, Python, Bash, SQL; Spring Boot, REST APIs, Git.

Infrastructure: Linux, Docker, Kubernetes, Helm, GitLab CI/CD, Ansible.

Observability and data: Prometheus, Grafana, OpenSearch/Elasticsearch, Kafka, Flink, ClickHouse; PyTorch.
